

Goff was visited by a contingent of about 15 folks from the customer's plant to runoff their new Goff Model Skew Roll SR2-15 Machine.

The special features of this machine include the overall heavy duty design to accept pumps and parts of near 5,000 lbs. over a 30 ft. length. We also included a heavy duty load and unload mechanism that is pneumatically activated.

After building probably 3,000 Dual Stage FES2-20 Separators, this is the first one with a platform!

The customer is thrilled with the design and the cleaning of their parts. They are impressed because we cleaned a monel coating in one pass at about 8 fpm to what it has taken them about one hour to clean before.
